SUMMARY

Full-stack developer with 4+ years building WordPress, Next.js, and Laravel systems engineered for speed: real-time bidding platforms, headless CMS migrations, custom CMS builds, Core Web Vitals remediation, and hardened Ubuntu VPS infrastructure managed over SSH. 100+ websites and systems shipped for clients across Europe, the UK, UAE, North America, and Southeast Asia. One standard on every project: it has to load fast, it has to rank, and it has to hold up under real usage.

EXPERIENCE

Senior Developer — DaikiMedia

Jan 2026 – Present · Lahore (Remote)

- **Nexus Clinic** (nexus-clinic.com): migrated an aesthetic clinic's site from traditional WordPress to headless WordPress + Next.js — **100 desktop / 95 mobile Lighthouse Performance, 0.8s LCP** — and own the GitHub-to-VPS deployment pipeline, server hardening, and Cloudflare routing.
- **Nexus Clinic CMS**: replaced the WordPress backend with a custom Laravel CMS — OTP-verified registration, two-factor login, email password reset, and a full published/unpublished/deleted editorial workflow — migrating **487 posts across 126 categories** with SEO-critical slugs intact.
- **Dr. Soma Plastic Surgery** (drsomaplasticsurgery.com): built a custom Laravel blog CMS with OTP two-factor admin login, serving content to the live site through a secure custom API.
- **DaikiMedia** (daikimedia.com): took the agency's own site from **46 to 95 mobile Lighthouse Performance (100 desktop)** with a full optimization pass on a static Next.js export.
- **Furnishings Malaysia** (furnishings.com.my): fixed a slow, already-built Next.js e-commerce site by replacing scattered API calls with a centralized caching layer — **97 mobile / 99 desktop Performance**.
- **VPS operations**: provision and run production Ubuntu servers over SSH alone — key-only auth, UFW default-deny firewall, Fail2Ban, Nginx + Let's Encrypt, PM2/systemd-supervised services, isolated staging with one-command promote-to-live deploys, automated daily health reports, and off-server backups.

Full-Stack Web Developer (WordPress & Node.js) — ultrasolz

2022 – 2025 · Lahore

- Built and maintained WordPress and WooCommerce sites for clients across automotive, business, and e-commerce industries.
- **Real-time vehicle auction platform**: developed the complete custom bidding engine in PHP/MySQL inside a bespoke WordPress plugin, with Node.js WebSocket live bidding, role-scoped Seller/Dealer/Admin dashboards, a full transactional email system, and the client's XD design implemented exactly as delivered.
- **Commercial vehicle marketplace network** (VYSA, Butzpark, Nutzfahrzeuge West, LKWFee, PKWFee): built custom listing, filtering, and search systems with centralized inventory dashboards across five production sites.
- Designed REST APIs for mobile apps and third-party integrations; managed server configurations, databases, backups, and site migrations; provided long-term maintenance and optimization for performance, SEO, and security.

CORE SKILLS

Frontend: React, Next.js, TypeScript, Tailwind CSS, JavaScript, jQuery

Backend: Node.js, Express, PHP, Laravel, REST APIs, WebSockets

CMS & E-commerce: WordPress (custom plugins & themes), WooCommerce, Headless WordPress

Databases: MySQL / MariaDB, MongoDB

Performance & SEO: Core Web Vitals, Lighthouse audits, caching architecture, technical SEO

Infrastructure & DevOps: Ubuntu VPS administration (SSH, UFW, Fail2Ban, Nginx, PM2, systemd), Let's Encrypt, staging & deployment pipelines (Git/GitHub), Cloudflare, Vercel, cPanel/Apache

EDUCATION

Master of Computer Science — Virtual University of Pakistan

2021

Bachelor of Arts — University of Sargodha

2017
